

Elite's new DynaWhite Outdoor Movie Projection Screen Material is a professionally engineered yet cost-effective solution that eliminates all of the problems encountered when trying to project on regular sheet fabrics. It is perfect for large social gatherings and uses its corner grommets to easily attach to its surrounding environment. This includes garage door frames, walls, trees or even home-made pole supports. Elite's Dynawhite is a 1.1 gain matte white PVC material. Its surface is textured to avoid hot-spotting while giving color neutrality, and a wide viewing angle. Each screen is professionally matted to enhance visual contrast and to absorb the light "bleed" of the projected image. All these features allow the average person to use it and make the DynaWhite Outdoor Movie Projection Screen Material a treasured asset for many seasonal events to come.
