

## OEUF® LEADS THE WAY WITH **ECO FRIENDLY** PRODUCTS AND FAIR TRADE BEFORE IT WAS THE LATEST TREND

Conservation is no stranger to Latvia, or Europe for that matter; it has been a way of life for generations. Concerning the environment, below are some points worth noting specific to the manufactures of Oeuf® furniture:

- Forest Stewardship Certificate holder
- 100% recycling of wood wastes into briquettes
- state-of-the-art dust collection and reprocessing of waste into usable fuel
- packaging recycling program through Green Points
- use of low emission MDF
- 100% self reliant heating through a modern heating system fueled by briquettes
- responsible recycling of finishing material through licensed collecting facilities after all components have been utilized to their fullest

Oeuf®, the New York-based design company known for their modern take on nursery furniture, has been a pioneer of fair trade and eco friendly products long before it was fashionable to do so. From its furniture line produced in Europe to its knits produced by a group of women knitters in Bolivia, Oeuf® has made it its mission to ensure environmentally sound products starting with the choice of materials to the manufacturing processes to the selection of recycled packaging.

Oeuf® furniture is produced in the small European country of Latvia. On the Baltic Sea, Latvia is covered by over 70% forest and thus has a proud tradition of woodworking. As a respected member of the European Community, Latvian manufacturers adhere to the standards and enforced regulations relating to labor, safety, quality, and the environment. The partners of Oeuf® believe those same standards best reflect their own values of fair work practices and conservation.

*"Oeuf®'s mission is to make good design available to as many people as possible while having a **minimum impact on the environment**," said Sophie Demenge, co-founder of Oeuf®. "We carefully select materials and manufacturers based on what feels right, not by what will reap the widest margins."*
